

Comprehensive Analysis and Dietary Strategies with Tableau

A College Food Choices Case Study • Folder 1: Ideation Phase

Project Leader:	Kavya Kavya
Prepared By:	Shaik M Aftab (Data Analyst)
Project Team:	Shaik M Aftab, Kavya Kavya, Maruthi Kumar, S Sameershah, Shaik Althaf
Host Organization:	SkillWallet Internship Program
Submission Date:	July 2026

Project Registry Profile

Repository Parameter	System Registry Data
Domain Scope	Data Analytics, Academic Demographics, and Interface Wireframing
Development Stack	Tableau Desktop, Microsoft Excel Datastore, GitHub Versioning
Target Folder	Folder 1 – Ideation Phase (Strategic Concept Definitions)
Release Version	v3.2 - Clean Production Delivery

1. Introduction & Project Backdrop

The dietary patterns observed within student cohorts frequently drop during the transition from highly structured household dining into decentralized university meal programs. Students face a unique combination of financial limits, tight schedules, and lack of home cooking experience. This analysis sets up a formal analytics repository to systematically decode these trends, formatting raw survey profiles into structured filters for final interactive Tableau visual dashboard generation.

Tableau Integration Purpose:

Rather than manually reviewing flat data rows, the Tableau processing engine transforms survey data into cross-highlighted filter blocks, enabling campus advisors to quickly pinpoint groups experiencing low nutritional health.

2. System Problem Formulation

Although modern campus cafeterias stock diverse ingredient menus, nutritional metrics remain uneven due to misaligned budget lines and unstructured information distribution.

 **Consolidated Problem Statement:**

The lack of a unified visual layout prevents analytics teams from matching weekly student grocery budgets against academic stress levels and daily sports activity. Consequently,

intervention strategies remain delayed, resulting in poor dietary choices during intensive evaluation cycles.

3. Defined Objectives & Scope Matrices

Objective 1: Data Synthesis

Consolidate scattered survey fields covering student finances, academic stress, and exercise frequencies into a uniform datastore.

Objective 2: Visual Interface

Establish stable mockup grids and action boundaries inside the visualization engine to handle future dynamic analytical parsing.

4. Empathy Mapping Matrix

THINK

- Wants to maintain body focus but routinely calculates food costs before checking out.
- Believes macro-balanced menu options are only available to affluent student groups.

FEEL

- Stressed by upcoming midterms, resulting in packing schedules.
- Experiences low physical energy due to relying on quick energy drink alternatives.

SAY

- "Nutritious fresh produce options break my weekly budget balances."
- "Fast food remains the only accessible choice open near libraries at midnight."

DO

- Skips scheduled morning meals entirely to catch early class lecture blocks.
- Relies on hyper-processed snacks during continuous coding or study blocks.

5. Target Stakeholder User Persona

Alex Mercer
Computer Science Sophomore

Age: 20 Years Old
Budget: \$50 / Week Limit
Tech Level: High (PC/Mobile)
Activity: Low Sedentary

"Balancing tight programming deadlines against a strict \$50 weekly budget makes it difficult to maintain balanced nutrition without relying on affordable fast food alternatives."

Core Goals:

- Find macro-balanced grocery selections within rigid spending baselines.
- Sustain mental focus and physical energy levels during high-stress exam cycles.

Core Frustrations:

- Nutritious dining options carry structural premium markups compared to value menus.
- Late-night study environments lack clean, dynamic meal delivery tracking systems.

6. Executive Phase Summary & Conclusion

The conclusion of Folder 1 establishes a precise, clean baseline concept directory for this data analytics initiative. By locking down stakeholder profiles, establishing project boundaries, and identifying key system problems early, the framework guarantees that all downstream development metrics directly target real student needs.
