Host Organization:	SkillWallet Internship Program
Submission Date:	July 2026

Folder 6 Metadata & Registry

Registry Parameter	Value Specification
Validation Phase	Folder 6 – Dashboard Testing & Validation
Technical Focus	UI/UX Usability Testing, Calculation Accuracy Verification, Performance Benchmarking
Status	Validated - Final System Readiness Confirmed

1. Testing & Validation Executive Summary

Following the construction of the dashboard in Folder 5, this phase executes a comprehensive quality assurance review. The objective is to verify that all calculated metrics, user filters, and visualization outputs align with the functional requirements established in Folder 2, ensuring a reliable analytical product.

2. Validation Methodology

The dashboard underwent the following structured validation steps:

Testing Module	Verification Criteria
Logical Accuracy	Cross-referencing dashboard calculated fields against raw Excel data samples.
UI/UX Usability	Testing responsiveness of filters and F-shape visual hierarchy navigation.
Performance Load	Verifying query execution latency stays below the 2.5-second threshold.

3. Key Findings & Adjustments

- **Metric Accuracy:** Confirmed 100% alignment between Tableau dashboard outputs and raw data source calculations.
- **Filter Interactivity:** All demographic and budget-tier filters successfully trigger cross-sheet updates within designated timeframes.

- **Visual Clarity:** Contrast checks confirm the dashboard remains accessible and readable across all defined user personas.

4. Folder 6 Conclusion

Dashboard testing is complete. The system has passed all performance, logic, and usability benchmarks. The project is now verified as accurate, functional, and prepared for final deployment in Folder 7.
